### SOLID Q2 WITH 9% ORGANIC GROWTH

"We can conclude a strong second quarter, driven by strong execution on internal initiatives as well as favorable market conditions. We continue to show good organic growth of 9% out of the total 14%. Underlying profitability developed well, with an EBIT margin of 17.2% (16.9%) if excluding costs related to the class action legal activities in the US.

Cash generation was strong in the quarter and leverage is now at 1.7, which creates a good platform for continued M&A activities. I am pleased to see that the integration of Oceanair and IPV goes according to plan. Finding more acquisition growth opportunities in attractive business segments is a top priority.

The last year's efforts to improve logistics and distribution have yielded good results in both Americas and EMEA. Another focus area right now is to manage a combination of productivity improvements and optimizing manufacturing capacities in a high demand situation. All regions have action plans, one example being the recently announced consolidation in China.

All in all, we summarize a strong first half of 2017. The outlook for our businesses remains unchanged and we have a full pipeline of activities to take us to our financial targets".
